

Yes Peas and Thank you!

How to Plant and Care for Your Pea Plant

1. Push a hole into the soil down to your first knuckle
2. Put in the pea seed and cover it up
3. Give your plant a name :)
4. Gently water your little pea and place it in a warm sunny spot by a window
5. Water your little pea daily and watch it grow
6. You can add little outdoor sticks to the sides of your pot. This is called a trellis and the pea will happily crawl up with its little tendrils.
7. Plant your pea pot and all in the ground just up to the soil line.

Your pea plant will eventually blossom and pollinators will come sip their nectar and help form some peas for you to eat. Don't forget to save some of your seeds. Eat some and save some!
